<b>Operations &amp; Algebraic Thinking</b>	Represent and solve problems involving multiplication and division.	<ul style="list-style-type: none"> <li>• Interpret products of whole numbers, e.g., interpret <math>5 \times 7</math> as the total number of objects in 5 groups of 7 objects each. <i>For example, describe a context in which a total number of objects can be expressed as <math>5 \times 7</math>.</i></li> <li>• Interpret whole-number quotients of whole numbers, e.g., interpret <math>56 \div 8</math> as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each. <i>For example, describe a context in which a number of shares or a number of groups can be expressed as <math>56 \div 8</math>.</i></li> <li>• Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays (rows &amp; columns), and measurement quantities.</li> <li>• Determine the unknown whole number in a multiplication or division equation relating three whole numbers. <i>For example, determine the unknown number that makes the equation true in each of the equations <math>8 \times ? = 48</math>, <math>5 = \square \div 3</math>, <math>6 \times 6 = ?</math>.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Multiplication</li> <li>• Product</li> <li>• Division</li> <li>• Quotient of whole numbers</li> <li>• Array</li> <li>• Whole number</li> <li>• Partitioned</li> <li>• Multiplication equation</li> <li>• Division equation</li> </ul>
	Understand properties of multiplication and the relationship between multiplication and division.	<ul style="list-style-type: none"> <li>• Apply properties of operations as strategies to multiply and divide. <i>Examples: If <math>6 \times 4 = 24</math> is known, then <math>4 \times 6 = 24</math> is also known. (Commutative property of multiplication.) <math>3 \times 5 \times 2</math> can be found by <math>3 \times 5 = 15</math>, then <math>15 \times 2 = 30</math>, or by <math>5 \times 2 = 10</math>, then <math>3 \times 10 = 30</math>. (Associative property of multiplication.) Knowing that <math>8 \times 5 = 40</math> and <math>8 \times 2 = 16</math>, one can find <math>8 \times 7</math> as <math>8 \times (5 + 2) = (8 \times 5) + (8 \times 2) = 40 + 16 = 56</math>. (Distributive property.)</i></li> <li>• Understand division as an unknown-factor problem. <i>For example, find <math>32 \div 8</math> by finding the number that makes 32 when multiplied by 8.</i></li> </ul>	<ul style="list-style-type: none"> <li>• Multiplication</li> <li>• Division</li> <li>• Commutative property</li> <li>• Associative property</li> <li>• Distributive property</li> <li>• Multiply</li> <li>• Divide</li> <li>• Unknown factor</li> </ul>
